

INVITATION TO PARTICIPATE IN  
CHILD HEALTH RESEARCH

# Children's Memory for Pain

Is your child **7½ to 16** years old?

Does your child  
**experience frequent pain?**  
(e.g. headaches, stomachaches)

## BACKGROUND

- Children may remember only the most threatening parts of a painful experience, even if the pain is mild and brief.

## OUR RESEARCH

- We're studying what kids remember about painful experiences so we can develop a memory-based intervention to help children cope with pain.
- For *part one*, your child will talk about two times when they felt hurt.
- For *part two*, your child will do a memory task & a cold water activity.

## BENEFITS

- Your child will get to choose a **small prize** or **\$5 cash** after each part.
- Parents & guardians will be entered into **two \$100 draws**.
